

Seif eddine Koubaa

ICT Engineering Student

✉ seifkoubaa5@gmail.com ☎ 98715818 📍 Tunis,Tunisia 🌐 Seif Koubaa 🎧 Skeggo ☁ Skego

Profile

Hard-working and passionate **Cybersecurity & AI Enthusiast** with strong analytical skills and a drive for innovation. Detail-oriented, adaptable, and eager to learn, with a focus on securing systems and building intelligent, reliable solutions.

Education

ICT Engineering Student National Institute of Applied Science and Technology (INSAT)	2023 – 2028 Tunis,Tunisia
---	------------------------------

Selected Projects & Hackathon Wins

1st Place – Menacraft AI Hackathon-Truth Engine GDSC FST Developed an AI-powered platform for misinformation detection using a FastAPI and NestJS-based backend with a modular processing pipeline . Integrated LLM-driven semantic analysis and prompt engineering to evaluate content authenticity, contextual consistency, and source credibility. Leveraged Cloudflare Workers AI for serverless edge inference , enabling low-latency and scalable analysis. Deployed the system using Cloudflare infrastructure , ensuring high availability and efficient request handling in a production-like hackathon environment.	04/2026
RedOps – AI-Powered Web Pentesting & Red Team Automation Platform Developed a modular red-team automation platform for web application security testing, built with a FastAPI backend , Redis-based job queue , and Dockerized infrastructure . Designed an automated reconnaissance and vulnerability scanning pipeline integrating tools such as httpx, katana, ffuf, and nuclei to perform surface discovery and exploit detection. Extended the platform with AI-driven reasoning components , enabling attack hypothesis generation, contextual analysis, and risk scoring to simulate real-world offensive security workflows. Focused on building a scalable, extensible system for DevSecOps and autonomous red teaming .	01/2026
3rd Place – AlxCyber Hackathon Esprit Business School Awarded 3rd place at the AlxCyber Hackathon hosted by <i>Esprit Business School</i> (48-hour challenge). Developed an innovative Wealth Management System for Tunisian startups and companies, integrating AI , cybersecurity , n8n automation , and real estate tokenization via blockchain and Hedera .	11/2025
CVE-AGENT-RAG AI-Driven Cyber Threat Intelligence Automation Built an AI-powered system that automates CVE data retrieval and semantic search using n8n workflows and Pinecone vector database . Designed an intelligent RAG pipeline for contextual vulnerability analysis, real-time querying, and threat summarization.	10/2025
1st Place – AI Recommendation Hackathon INSAT Junior Enterprise Won 1st place at the INSAT Junior Enterprise Hackathon for developing an AI model that recommends the most suitable trainings for members based on internal data. Built and integrated the model into a full-stack web application within 4 hours , and deployed it through Cloudflare for a production-ready demonstration.	04/2025

Skills

Cybersecurity

Network Reconnaissance,Vulnerability assessment,Penetration Testing,CTF Player,Burp Suite,Metasploit

Full-Stack

Node.js, Tailwind CSS, React, FastAPI, Cloudflare Workers, Microservices, Docker

Programming

Python, TypeScript/JavaScript, C/C++, Java, SQL, PowerShell

AI & Data:

RAG, Ollama, n8n, LangChain, Qdrant, HuggingFace

Languages

English – Proficient

French – Proficient
